Profile

Self-driven Software Engineer with 1+ year of professional frontend experience and a rapidly expanding full-stack skill set. Specializes in React.js, React Native, and TypeScript for web and mobile, with growing hands-on expertise in Go (Golang) backend APIs, PostgreSQL schema design, ERD-based system architecture, and AI-powered SDLC workflows using MCP. Has personally shipped production-grade mobile apps from database design to deployment, including a multi-language e-commerce platform and a white-label multi-tenant QSR app. Passionate about contributing to high-impact teams, learning fast, and building products that solve real problems.

Skills

Mobile - React Native CLI, React Native Expo, TypeScript, i18n, MMKV, Notifee, Firebase Cloud Messaging

Frontend - React 18, TypeScript, JavaScript (ES6+), Next.js, Tailwind CSS, SCSS, HTML5, React Hook Form, Framer Motion

Backend - Go (Golang) REST APIs, Medusa.js (e-commerce engine), Node.js, PostgreSQL, Docker

State & Data - Redux Toolkit, Zustand, React Query, Axios, MMKV local storage

Architecture - ERD design, Atomic Design, MVP feature scoping, AI-powered SDLC

AI & Tools - MCP server integration, AI-assisted development workflows, Cursor, Figma, VS Code, Git, GitHub, Vite, ESLint

Testing - React Testing Library, Cypress, real-device QA testing

Languages - English (Upper-Intermediate B1+), Burmese (Native)

PROFESSIONAL EXPERIENCE

DevelopX

Frontend Web Developer

2025(May) – 2025(August)

Project: Veteran Driver V1

A location-based mobile-first web application designed to help users discover, save, and organize local businesses across Southeast Asia. Veteran Driver V1 focuses on interactive map-based discovery, multi-language support, and a simple, intuitive user experience.

- Built core frontend architecture with React 18 + Vite; delivered optimized builds and fast rendering
- Integrated Google Maps API and Leaflet.js for real-time interactive location discovery
- Implemented multi-language support (EN, JA, KO, ZH) using i18next with full routing and UI alignment
- Developed tab-based navigation (Home, Favorites, Profile) with smooth Framer Motion animations
- Built favorites management system: save, organize, and rename places with custom interactions
- Integrated React Query + Redux Toolkit for global state and async data fetching
- Delivered responsive, mobile-first UI with PWA capabilities and Tailwind CSS custom components
- Collaborated with backend team on API contracts, error handling, and performance optimization

Tech Stack: React 18, TypeScript, Vite, Tailwind CSS, Redux Toolkit, React Query, i18next, Leaflet, Google Maps API, Framer Motion, Git, Figma

Anycall Mobile

Online Customer Service &
E-commerce App Data Entry Staff

2024(Jan) – 2024(September)

Managed real-time customer support via Facebook, Messenger, and phone across multiple channels

Maintained accurate product listings, inventory data, and daily/weekly KPI reports for business owner

Trained a junior staff member in Messenger automation workflows and order tagging

Handled conflict resolution, refunds, and escalations with a customer-first approach

INDEPENDENT PROJECTS & R&D

Techzy

E-Commerce Mobile App (Personal Project)

- Full-Stack E-Commerce Platform — React Native CLI + Medusa Backend
- End-to-end e-commerce application built from scratch using a self-directed AI-powered SDLC methodology: business analysis → ERD design → UI wireframing → implementation → deployment.
- Designed complete PostgreSQL database schema from business requirements using ERD modeling principles
- Built and tested Medusa.js backend engine locally via Docker (PostgreSQL in container)
- Architected MCP server connections to sync context between AI agents across each development phase
- Implemented full atomic component structure: atoms → molecules → organisms → features for UI; lib → services → hooks for business logic
- Pushed system push notifications by triggering Medusa events via Firebase Cloud Messaging (FCM) using Firebase Admin SDK and Notifee library
- Built wishlist/product-saving feature using MMKV local storage for fast, persistent data
- Supported English and Myanmar languages using i18n internationalization
- Implemented dark, light, and system-default theme switching via global theme provider
- Explored and documented SQL vs NoSQL trade-offs through hands-on PostgreSQL testing
- Tech Stack: React Native CLI, TypeScript, Medusa.js, Go, PostgreSQL, Docker, Firebase Admin, FCM, Notifee, MMKV, i18n, MCP

NextBite

White-Label Multi-Tenant QSR App
(Personal Project)

Multi-Tenant Quick Service Restaurant Platform — Go Backend + React Native Expo

- A white-label, multi-tenant QSR (Quick Service Restaurant) mobile app designed for scalability across multiple restaurant brands, with a Go REST API backend and React Native Expo frontend.
- Designed and implemented Go (Golang) REST API backend: defined API routes, request/response schemas, and database models
- Implemented multi-tenant architecture supporting multiple restaurant brands from a single backend
- Applied AI-powered SDLC: converted business flow into ERD → Figma UI pages (via Pencil) → coded implementation → deployment
- Used MCP server integrations to coordinate AI agent sessions across design, backend, and frontend phases
- Built React Native Expo frontend with clean navigation, ordering flows, and brand-specific theming
- Conducted R&D on AI-assisted software architecture: turning business requirements into structured software artifacts

Tech Stack: Go (Golang), React Native Expo, TypeScript, PostgreSQL, MCP, Figma/Pencil, Docker

EDUCATION & CERTIFICATIONS

University of Computer Studies Mandalay
Computer Science (Year 1, 2019–2020)

English Language Certificate — B1+ Upper Intermediate
The Space Language Center
